International application No. PCT/IT03/00203

EXAMINATION REPORT - SEPARATE SHEET

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document:

D1: US-A-5 544 906

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows (the references in parentheses applying to this document): a human powered mobile means, where it comprises a main frame and at least one modular element connected to said frame.

The subject-matter of claim 1 differs from this known mobile means in that the modular element is adapted to accomodate at least one person and is provided with ergonomic operating means nad is connected to said frame with reversible quick coupling means.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

The problem to be solved by the present invention may be regarded as making the mobile means more flexible in the way of use.

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons: in document D1 the power element remained the same and the guiding system (wheels, skis, keel) was changed. It is nowhere disclosed to have modular (human) power elements. The man skilled in the art would not without an inventive step consider making this part modular.

Claims 2-9 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

15A

1. A human-powered mobile means, characterized in that it comprises a main frame (2) and at least one modular element (1a-1e), said modular element (1a-1e) being adapted to accommodate at least one user, provided with ergonomic operating means, and connectable to said frame (2) by means of reversible, quick coupling means (4, 5, 8, 9), thus being interchangeable with further modular elements (1a-1e).

CLAIMS

SEE PAGE 15A

- 1. A modular system for realizing mobile means or static machines operated by human muscular strength, characterized in that it comprises modular elements (la-le) provided with ergonomic operating means for use by one or more persons, and a main frame (2) in which said modular elements may be selectively connected to said main frame, singularly or in a plurality, by means of reversible quick hooking means.
 - 2. A modular system according to claim 1, characterized in that said reversible quick hooking means comprise linear guides (5) fixed to said main frame (2) and trolleys (4) sliding along said guides (5), associated to said modular elements (1a-1e).

3. A modular system according to claim X, characterized in that said linear guides (5) comprise a plurality of references (8) adapted to cooperate with blocking means (9) associated to said trolleys (4), for determining blocking positions univocally selectable for said trolleys (4).

mobile means

4. A modular system according to claim 1, characterized in that said reversible quick hooleing means comprise at least one housing (10) associated to said main frame (2), for the insertion of a base (11) associated to said modular elements

5

17

(la-le), and that may be blocked in position inside said housing (10).

mobile means

- 5. A modular system according to claim 1, characterized in that devices for absorbing mechanical energy (30, 31) are propulsion means (30) associated to said main frame (2). mobile means
- 6. A modular system according to claims 1 and 4, characterized in that said main frame (2) and said modular elements (1a-1e) comprise transmission means (40, 41) that may be reversibly connected one to the other, and that may connect the ergonomic operating means associated to the modular elements (1a-1e), to the absorbing devices (30, 31) associated propulsion means (30) to the main frame (2).

mobile means

7. A modular system according to claim 1, characterized in that propulsion said modular elements (12-1e) comprise devices (30) for means -absorbing mechanical energy mechanically connected to the operating means associated to said modular elements.

Commobile means according to claim 1 and for use as a >

8. A human powered boat, characterized in that it comprises a modular system according to one or more of the preceding claims, wherein said main frame (2) comprises hulls (50a, 50b) connected by beams (52) for supporting at least one frame (53) to which reversible quick hooking means (5, 10) for said modular elements (1a-1e) are associated.

2 mobile means according to claim 1 and for use as 2>

- 9. A human powered boat, characterized in that it comprises a medular system according to one or more of the preceding elaims, wherein said main frame (2) comprises hulls (50a, 50b) connected by a platform (51) comprising said reversible quick hooking means (5, 10) for said modular elements (1a-1e).
- 10. A mobile mean or a static machine operated by human muscular strength, for training, physical exercise or recreational use, characterized in that it comprises a modular system according to one or more of the preceding claims.
